Fifty routers used hard-coded credentials, where a known username and password was encoded into the router as a default credential that asked the user to change it—but would still be there, accessible, if they did not. FKIE could not find a single router without flaws.

How home router manufacturers dropped the ball on security ...

The router is in the engine room and uses a single antenna to broadcast its 2.4 GHz signal throughout the vessel. Management of the router and incoming wireless signals and administration of the router is managed through a graphic user interface (GUI) that is accessed using an IP address. The competitor's GUI is a bit cumbersome, but like ...
